The Plane of the Future

This plane will not only be changing the world of airplanes it will also be economically smart.
The Use of Ethanol fuel

- Ethanol fuel is a much more cleaner fuel than conventional gasoline, it is a mixture of conventional gasoline and ethanol. This mixture is a much safer and clearer type of fuel. Ethanol is in use today as a gasoline for cars, we have decided to put it into planes.
The New Runway Design

- With this new runway design not only will planes be able to get into the air quicker but, it will cost less because the distance will be shorter.
The Harrier Jump Jet Engine

- With this engine the new Ethanol fueled planes will be able to adapt to the new runway and take off.
The End
