Course and Instructor Contact Information

Instructor: Dr. Nick Compin
Office Location: Contact Instructor
Telephone: 916 653-4575
Email: talosjaka@yahoo.com
Office Hours: By appointment
Class Day/Time: Tuesdays, 5:30-9:30 pm, on Oct. 8, 15, 22, 29; Nov. 5, 12, 19, 26; Dec. 3, 10.
Classroom: Specified video-conferencing locations (For locations, contact the MSTM Coordinator, Michelle Waldron)
Prerequisites: MTM 201 or MSTM Program Director consent
Course website: Canvas (http://sjsu.instructure.com)

Course Format

Students must have regular access to email and the internet in order to communicate with the instructor, submit assignments, and engage in other class activities.

Students attend class sessions by going in person to one of the MTM program videoconferencing sites *or* by joining online using Zoom, SJSU’s online meeting application. Details on each option are as follows:

MTM Class Videoconferencing Sites:

Videoconference sites are located at the Lucas Business Complex (Santa Clara, CA), Caltrans district offices, and other participating agencies. For information about these options, contact the Program Coordinator, Michelle Waldron, at michelle.waldron@sjsu.edu.

Online Access via Zoom:

You can join class using SJSU Zoom from any location, as long as you:
- Are in a quiet room without distractions (e.g., no family members or colleagues walking through or asking questions)
- Have stable internet access
- Use a video camera and good quality microphone so that you are seen as well as heard
- Follow good "meeting etiquette" principles (one such list: https://blog.gotomeeting.com/7-rules-virtual-meeting-etiquette-every-professional-know/)

To access class sessions by Zoom, click on the following link from your computer or tablet: https://sjsu.zoom.us/j/9471696533

Plan to join at least ten minutes before 5:30 pm, to make sure you are ready when class begins. (The very first time you join from a computer or device, allow extra time for set-up.)

The university has many useful tutorials on how to use Zoom here: http://www.sjsu.edu/ecampus/teaching-tools/zoom/index.html

**Faculty Web Page and MYSJSU Messaging**

Course materials such as syllabus, handouts, notes, assignment instructions, etc. can be found on my faculty web page at http://www.sjsu.edu/people/nicholas.compin and/or on Canvas Learning Management System course login website at http://sjsu.instructure.com. You are responsible for regularly checking with the messaging system through MySJSU at http://my.sjsu.edu (or other communication system as indicated by the instructor) to learn of any updates.

**Course Description**

Examines management of transportation planning and project development processes, including: regional and state system-wide planning; project-level planning; environmental review; obtaining governmental approvals and permits; contract management; and project management.

**MSTM Program Goals:**

(Note: Not all program learning goals are covered in every course)

**Goal One: Management of Transportation Organizations**
Develop a system-level and global perspective on the management of transportation organizations.

**Goal Two: Transportation Policy**
Develop an awareness of the transportation policy environment, including fiscal mechanisms, legislative structures, and intergovernmental coordination.

**Goal Three: Leadership**
Develop potential for leadership in transportation organizations.

**Goal Four: Communication Skills**
Develop written and oral communication skills and techniques.

**Goal Five: Analytical Skills**
Develop ability to analyze management issues and situations using appropriate conceptual approaches.

**Goal Six: Information Technology**
Develop basic understanding of commonly used information technology applications used by the transportation industry.
Course Learning Outcomes

In this course students will explore the planning and development of surface transportation systems in the context of current and past government goals, policies and regulations. The goal is for students to begin to understand the complex interrelationships that exist between transportation, land use, and the environment, the balancing of competing interests in the multi-faceted and multi-jurisdictional intergovernmental settings that are characteristic of states and major metropolitan areas, and the processes followed to develop consensus on transportation strategies.

Upon successful completion of this course, students will be able to:

1. Explain the general history of transportation planning in the US and the impact of transportation planning on the transportation system.
2. Explain current processes and theories for state, regional, and project planning
3. Explain how community involvement and environmental review influence planning processes
4. Design effective and feasible performance measurement tools
5. Explain best practices in managing contracts and contractors
6. Explain the basic tenants of project management

Required Texts/Readings

Textbook
There are many on-line sources for this text.

Other Readings
Any additional reading will either be publicly available or be provided by the Professor.

Other technology requirements / equipment / material
Current events - gathered each week by students. All other materials for this course will be available on the internet or provided by the instructor.

Library Liaison
The Library Liaison for the Lucas Graduate School of Business is Christa Bailey (christa.bailey@sjsu.edu).

Course Requirements and Assignments

The following activities/assignments are required in this course and will be graded: session class discussion/current events – each student is expected to bring a current event to each class session and be able to discuss the transportation planning issues it relates to; a team assignment – students will be assigned to teams to research transportation data and present findings to the class; two individual class papers – each student will be expected to complete two 5-10 page papers on transportation-related topics; and a course project – students may work individually or in pairs to complete a transportation plan and present it to their classmates.
Assignments/papers are open book, open notes, and will be sent out to students during specified times. Each student will be allowed a specified amount of time to complete each assignment/paper. Students will then be required to e-mail their completed assignments/papers to the instructor. Any technical difficulties encountered should be reported to the instructor immediately. Tentative course calendar including assignment due dates, date of final exam is “subject to change with fair notice”.

</tbody>
</table>

**Final Examination or Evaluation**

The course project is due to the instructor on the last day of class. Students are also required to make a presentation to the class discussing their course projects during the last class meeting.

Students are allowed to work individually or in groups of two students. If students work in groups, they must describe the roles and responsibilities of each team member in the completion of the project and final report. All work may be submitted via e-mail to the instructor as an attachment in MS Word or PDF format. Work may also be submitted by mail or hand delivered on or before the due date. All project reports require an Executive Summary and a Table of Contents. Students should clearly identify all of their work with the student’s name and site location on all submitted work.

**Grading Information**

The following chart lists value of each graded assignment and its relationship to overall course grading. Each graded assignment will be returned to students with comments to ensure how specific grades were determined and assigned. Students will have an opportunity to contact the instructor at any time to discuss grades, progress, or other issues as necessary. Should a student wish to speak directly with the instructor, a mutually beneficial time will be identified and the student will contact the instructor by phone at the number provided on the first page of this syllabus.

**Determination of Grades**

Success in this course is based on the expectation that students will attend each scheduled class. Grading will be determined through a combination of scoring on Class Discussion/Current Events, a Class Assignment, Two Class Papers, and a Course Project.

- Class Discussion: Students are expected to have reading completed and be prepared, on the date indicated in the schedule of assignments (below), to discuss the assigned readings and additional readings assigned or as required for the full development of classroom discussions.
• Current Events: As part of the “participation” portion of the class, students are required to bring with them to every class one current event that they may be asked to present to the class.

• Course Project and Assignments/Papers: Please see above.

• Assignments turned in late, will result in a full grade reduction. For example, if a paper were awarded an A, but was turned in late, the assigned grade would be a B. Depending on the justification, there is no limit to when assignments may be turned in late for a grade.

*Extra credit is not available in this course.
