EMERGENCY PREPAREDNESS IN MOTION: THE ROLE OF ICS IN TRANSPORTATION

If a wildfire, earthquake, or cyber emergency impacts a transit system—what happens next? How do transportation agencies respond in an emergency? The use of an Incident Command System (ICS) allows for a uniform response method for emergencies and is required by FEMA and the FHWA. ICS, however, is rarely used by transportation personnel. Join transportation and emergency response experts for a discussion of the pros and cons of implementing ICS training for field-level transportation supervisors and staff. Don't miss this opportunity to better understand emergency response best practices in our industry.
