

Energy Savings & Concerns: The Evolution of Right Turn on Red Policies

Right turn on red (RTOR) has been employed as an energy-saving measure around the country since the 1970s, but recent research puts the practice into question. Join MTI Research Associates Dr. Bruce Appleyard and Dr. Anurag Pande as they dig into the data and demonstrate why RTOR movements are actually unsafe—for pedestrians, bicyclists, and drivers—while only marginally useful in lowering emissions. Be a part of the conversation on informed decisions about RTOR policies and taking action to improve road safety for everyone!
