Ransomware, data breaches, phishing incidents and other cyber threats are on the rise, including among public transit agencies. Such threats leave the transportation sector—one of 16 critical infrastructure sectors whose disruption would have a debilitating effect on our nation's security—in a vulnerable position. Decision makers need to be prepared to upgrade, patch, and secure transit systems to ensure that this essential service remains safe and operational. Yet new MTI research found that only 60% of transit agencies have many of the basic policies or personnel in place to respond to a cyber incident. In recognition of Cybersecurity Awareness month, MTI researchers will discuss this critical research and the policy recommendations needed to understand, mitigate, and respond to cyber threats.
